EDUCATION

CUNY Brooklyn College May 2026

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures, Analysis of Algorithms, Web Applications, Software Engineering, Database Systems, Systems Programming, Introduction to Software Engineering

CUNY Borough of Manhattan Community College August 2022

Associates in Science in Psychology

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL

Frameworks & Libraries: Next.js, React, Node.js, Express, FastAPI, Phaser 3, Tailwind CSS, Recharts

Tools & Platforms: Git, GitHub, Supabase, PostgreSQL, Google BigQuery, Looker Studio, Vercel, ChromaDB, REST APIs, Claude Code

AI & APIs: OpenAI GPT-4o-mini, Groq API, Google Gemini, LangChain, ElevenLabs TTS

WORK EXPERIENCE

Design Implementation Group — Software Engineer July 2026 – Present

- Replaced the company's Excel/Dropbox procurement workflow with a full-stack web app (Next.js, TypeScript, PostgreSQL/Supabase, Vercel), reproducing real client proposals to the cent, by writing the requirements and design and directing AI-assisted development (Claude Code).
- Moved warehouse receiving from paper reports and spreadsheets to a phone-first workflow (partial deliveries, damage counts, photos, returns), verified with a real warehouse sign-in, by writing the design doc and implementing each receipt as a single database transaction.
- Isolated pricing from restricted roles and each warehouse partner's data from the others with PostgreSQL row-level security, and grew database tests from 91 to 253 checks, each proven able to fail through mutation testing.

Sports Media Inc. — Software Engineer October 2025

- Designed and deployed a Looker Studio dashboard connected to BigQuery, providing monthly performance summaries for over $2.7B in ticket revenue and 69M tickets sold across multiple sports teams.
- Developed and optimized SQL queries to clean, aggregate, and join datasets, improving data refresh time by ~40%.
- Collaborated with the marketing analytics team to identify key revenue drivers and streamline data pipelines, cutting reporting time by 80%.

PROJECTS

SpeedReading App Spring 2026

Next.js · Node.js/Express · Supabase · PostgreSQL · Groq API · TypeScript · Tailwind CSS · PWA · CISC 3171

- Built a full-stack Progressive Web App that trains users to read faster while maintaining comprehension, deployed to Vercel with a live production backend, with guest and registered user flows via Supabase Auth (OAuth + anonymous sign-in) and Row-Level Security.
- Engineered a client-side RSVP (Rapid Serial Visual Presentation) reading engine with ORP (Optimal Recognition Point) highlighting and dynamic WPM speed control, running fully offline during active sessions.
- Integrated the Groq API to auto-generate multiple-choice comprehension quizzes after each reading session, with scores stored in Supabase and surfaced on a Recharts progress dashboard.

Beyond Barriers — Educational Accessibility Game Spring 2026

Phaser 3 · JavaScript · Python · FastAPI · Google Gemini · LangChain · ChromaDB · ElevenLabs TTS · CISC 4900

- Developed a 2D educational platformer simulating campus navigation with a peripheral vision limitation, raising awareness of accessibility challenges for a senior capstone presentation.
- Built a RAG (Retrieval-Augmented Generation) pipeline using Google Gemini, LangChain, and ChromaDB to dynamically generate quiz questions from research PDFs, gating level progression.
- Integrated ElevenLabs TTS narration and a real-time anxiety meter mechanic to create a research-backed simulation of visual impairment.

LEADERSHIP & ACTIVITIES

Brooklyn College Computer Science Club — E-Board Member, Club Connector 2025 – 2026

- Launched a resources page on the open-source club website (TypeScript, Tailwind CSS) centralizing tutoring and study materials for 900+ CS students, and maintain the site for the computer science community.
- Serve on the executive board, managing communications and outreach to connect students with club resources, events, and opportunities.

Hack Brooklyn 2026 — Co-Organizer April 2026

- Coordinated with faculty, department chairs, and administration to secure approval and support for a 100+ participant hackathon.
- Organized and managed a Discord server for 100+ participants, handled in-person logistics with sponsor support, and helped manage a $10,000+ event budget.

Presenter — CIS Day 2026 | Brooklyn College Department of Computer & Information Science

- Presented the Beyond Barriers accessibility game to faculty, alumni, and students at the department's annual showcase.
